

Emergency Planning Policy

- 1 When there is an identified emergency or disaster in the community, staff will implement the Emergency Water Supply Plan.
- 2 If staff must evacuate the home during an emergency, they will transport all available emergency water. The emergency water is stored with the emergency food and can be easily transported.
 - 2.1 The emergency water supply will be sufficient to ensure that there is one gallon of water per person (including staff) for three days.
 - 2.2 All emergency water will be in transportable containers.
 - 2.3 The emergency water supply in the house will be checked on a monthly basis to ensure the quality of the water. It will be rotated as needed to ensure fresh supply is available.
